

Problem statement

Given any two points (lat and lon), draw the route on Google Maps with an animation of a person walking on the path at an average walking speed. You can hardcode and take any two points. It could be in a straight line as well. The main criterion is that there should be a route drawn between the points with animation of a person walking along the path.

It should be similar to this [this](#).

You can use the below two resources for your help -

1. <https://www.youtube.com/watch?v=1QTnMghzTyA> (covers basics)
2. <https://www.youtube.com/watch?v=kxAwkT9M6rM>

Submission

Please submit the code's git repo and a screen recording of the working application. Also, do not hesitate to ask questions through Intershala chat.
